Facial Animation Creator **PRO** CrazyTalk6

Edit and customize expressions & emotions for your actors

Revolutionary storytelling engine with actor animation control

Automatic audio lip-sync from text and voice

The fastest way to generate virtual actors for any media project

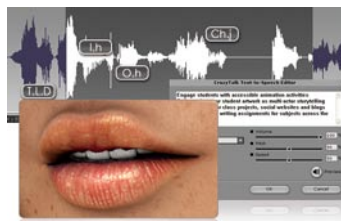

CrazyTalk6 PRO interfaces facial animation with evolutionary real-time puppeteering controls empowering you with command performance over character facial expressions. Designed for flexibility, the CrazyTalk6 facial animation tools fit into video and interactive projects for Adobe Premiere, After Effects, and Flash while supporting video output that works seamlessly with Sony Vegas, Corel VideoStudio and Magix Movie Edit Pro.

Fitting Wizard for Image Animation

- NEW** • Multi-character setup identifies up to 4 actors in any image.
- NEW** • 2 major frames for face and full body fitting.
- NEW** • Enhanced face orientation and hair mesh.
 - Mask editor allows faces to overlay on custom photo backgrounds and SFX.
 - Apply emotive facial expressions during talking animation.

Lip-sync for Talking Characters

- Animate characters with your own voice, recorded audio or typed text.
- Automatic natural lip-sync animation from audio and text.
- Emotive library with instant expression and animated SFX.

Face Profile Styles for Character Definition

- Animate a variety of characters, including human, animal, and cartoon-like faces with realistic performance behavior.
- Customize any of 9 Face Profile Styles for unique facial performance.
- Facial motion control for style effect and performance behavior.
- Select eyes and teeth to perfectly match your character personality.
- Import any custom image for the eyes and teeth texture.
- NEW** • 4 layers of Vivid Eye settings - Eyeballs, Eye Optics, Eyelashes, Eye Shadow.

Timeline Editor for Commanding Performance

- NEW** • Two major editors: Stage Editor for casting actors; Timeline Editor for detailed script editing of individual character.
- The CrazyTalk Timeline enhances pro control with key and sequence editing.
- Master animation track sequence for perfect lip-sync and natural emotion.
- Motion clips add instant expressions to the Timeline including full face, eye, head, and SFX track performance.
- Record real-time facial puppeteering and save them in layers as Motion Clips storing all the data for every facial feature animated during the live puppet session.
- Dual-layer Special Effects (SFX).
- Camera system to zoom characters with free head zoom and rotation.

Real-time Puppet Animation

- Use a mouse or handheld device to puppet character animation in real-time.
- NEW** • Free head and body movement control to freely move or scale your actor for a dynamic comic show.
- Select character expressions or facial features and puppet their behavior as you playback the recorded audio.
- Face Puppet Profiles provide attitude presets for puppeteering full facial expressions.
- Full facial feature control of 6 attitudes matching various puppet personalities.
- Solo Feature control panel for CrazyTalk PRO allows for precise puppet performance.

Flexible Media Output

- Large size for NTSC, PAL and HD size output.
- Custom video sizes, MPEG-4 video with adjustable video and audio quality.
- Flash™ FLV video with Standby motion included.
- NEW** • Create and export interactive Flash avatar / Widget for Web 2.0 applications.
- NEW** • Instantly share your creation on YouTube via CrazyTalk optimized output function.
