

CrazyTalk Developer API

Interactive Avatar

Create unique talking characters for your apps and games

The CrazyTalk product family has now expanded to provide intuitive cross-device avatar interaction utilizing Reallusion's Auto Motion and Face Puppet technology. CrazyTalk is the most popular facial animation tool that uses text and voice input to vividly animate any facial image. With the release of the CrazyTalk API, web designers and app developers can now create custom interactive talking characters for any mobile app or game.

Audio Lip-sync

Auto Animation

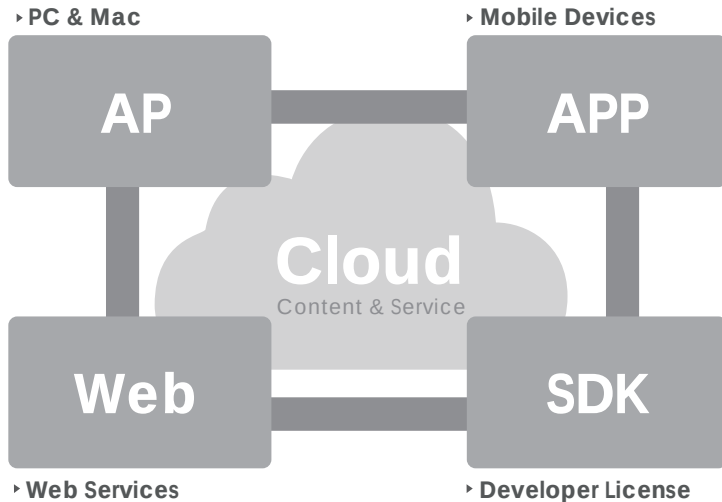

Touch & Motion Sensor

App Integration

Cross-platform Avatar Interface

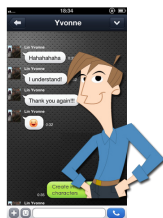

The CrazyTalk Developer solution allows you to author once and play back on multiple platforms including desktop AP (both PC & Mac), mobile devices, and web services. By utilizing CrazyTalk's award-winning Auto Motion technology, developers can lip-sync animate their custom characters from text or audio sources, generate realistic facial movement with purely voice input, and make touch-friendly expression controls. The incredible power and flexibility of the CrazyTalk API lets you easily integrate your own interactive avatar applications, and easily share your unique creation through the cloud.

Interactive Avatar Applications

Talking Apps

- ▶ Develop apps with interactive and fun characters that respond to the user's voice and messages, or even read the text of a book automatically.

Mobile Game

- ▶ Create game characters with cool facial animation, and then touch, shake, and play to create unique expressions and facial performance.

Web Host

- ▶ Promote your website with a virtual host that can guide you around with natural facial animation and friendly eye contact.

Social Service

- ▶ Build viral marketing campaigns that allow your visitors to customize their image in order to be integrated into your entertaining scripts or animation.
