

Features

Render & Output

Popular Image & Video Format Output

- Custom video size and ratio. Output your creations as videos or images in different sizes, resolutions and file formats for practical usage.
- QuickTime HD videos with various codecs: DVD-NTSC, DV-PAL, MPEG-4, H.264 and others. Resolution up to 1920x1080.
- Image Sequences in BMP, JPG, and Alpha Channel (TGA, PNG).

Superimpose your Avatar for Video Editing

- You can replace unique color backgrounds such as iMovie, or apply image sequences with Alpha Channels (TGA, PNG) to composite with other professional video editing tools.

Publish your Avatars to Mobile Devices

- Not long after introducing CrazyTalk7 to the Mac community, we will release the iOS Apps version with the intuitive auto motion technology for you to create talking applications on mobile devices.
- Experience using your own voice to interact with virtual actors on your mobile phone. Stay tuned to watch your lovely characters perform authentic animations right on your handheld device.
- You can also export your own interactive characters from CrazyTalk7 (for Mac) to mobile devices to play, share and render anytime, anywhere, with anyone!
