Photo Effects

Smart Color Correction

Scene-based Photo Tone Settings

- Instant image correction with scene-based presets, such as backlight, smart portrait, landscape, and more.
- Create vibrant colorful photos from imperfectly lit images such as over/under exposed, taken with a low quality camera or washed-out due to backlighting.
- Use auto face detection and brighten up the face using face-centric exposure settings.
- Slider-enhance the exposure, contrast, recover, fill light, and vibrancy values.

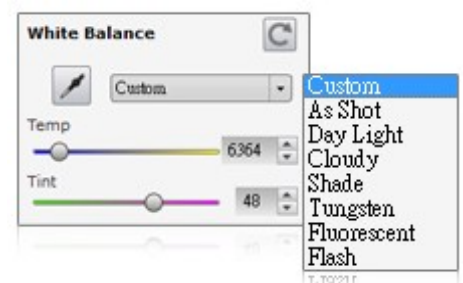

Cool

Warm

White Balance Adjustment

- Fix minor color flaws with the white balance feature.
- Warm up or cool down the photo by using the Temperature slider, and mix green or red colors with the Tint slider.
- Correct the color with sampling methods by using the color picker tool. (PRO Only!)
- One-click color correction with scenario-based presets, such as day light, cloudy, flash, and more. (PRO Only!)

Apply Post Effects with Lens Filters

- Apply post effects with lens filter templates, including black and white, Lomo style, sepia, tone, and vignette.
- Freely adjust the balance, brightness/contrast, hue/saturation of the photo.
- Frame your photo and draw attention to the subject with a custom vignette effect, where you can adjust the size, level, along with the width and height ratios.

Create Stunning DSLR Effects

Smart Photo Focal Adjustment

- Transform a normal photo into a studio-level photo taken with a high-end DSLR camera.
- Quickly separate the foreground and background with the smart Mask Tools.
- Achieve various focal effects using DOF templates.
- Further fine tune the balance, brightness/contrast, hue/saturation of the image foreground or background separately.

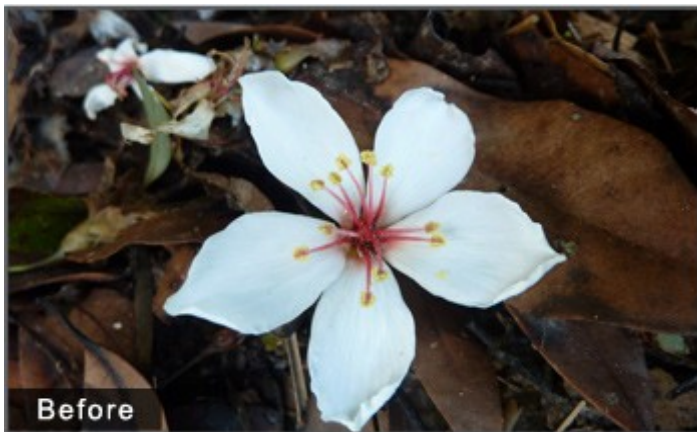

Simulate Realistic Visual Space with Focal Gradients

- Transform a normal photo into a studio-level photo taken with a high-end DSLR camera.
- Quickly separate the foreground and background with the Smart Mask Tools.
- Achieve various focal effects using DOF templates.
- Further fine tune the balance, brightness/contrast, hue/saturation of the image foreground or background separately.

Selective Recoloring

- Custom mask the foreground and background to draw attention to a particular point in the image.
- Create sophisticated visual effects using the gradient meter and gradient mask pattern tools.

Enhance the Photo with Bokeh Effects

- Define a Bokeh shape and apply a glittering effect to the selected areas.
- Determine the strength of the effect with the Aperture slider.
- Generate a Gradient Bokeh effect by setting the gradient pattern.
