

3D FACE PIPELINE

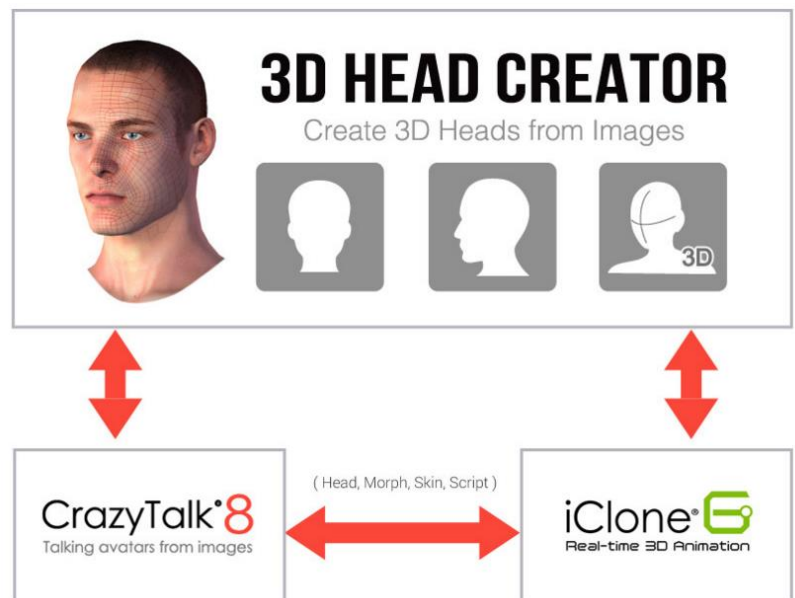

3D Head Creator. One-click 3D Head Export. Export Talking Scripts.

NEW in v.8!
PIPELINE ONLY

WORK SEAMLESSLY WITH OTHER 3D TOOLS
(WINDOWS EDITION ONLY)

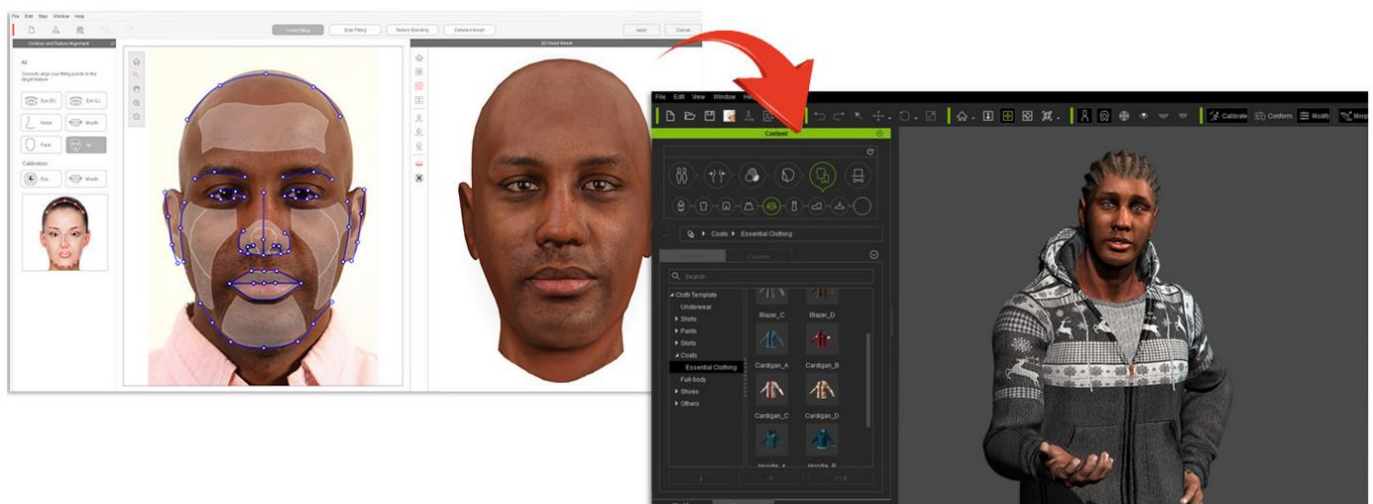

3D Head Creator Supports both CrazyTalk 8 & iClone 6

With CrazyTalk 8's shared module design, the new 3D head creator can be launched from either inside CrazyTalk 8, iClone 6 (v6.3 above), or Character Creator (v1.3 above). Also, not only can the 3D Head meshes and textures be exported to iClone, but you can also edit and share the same talking scripts created by CrazyTalk 8.

One-Click 3D Head Export

Once your 3D Head editing is complete, use the One-click option and send your 3D head and textures directly to Character Creator and iClone to create complete 3D avatar and full-body animations, or send them to any other 3D tools via 3DXchange for a wide range of applications.

Export Talking Scripts from CrazyTalk 8 to iClone 6

You can edit and share the same talking scripts created by CrazyTalk 8, which have separated actor track editing and Auto Motion effects. This gives iClone 6 users an empowering script editing environment to easily sync talk and head movements, and to help them precisely perform to the tempo of any music.
